EXCELTM

Create, update, and mass upload your pre-validated data into Oracle using the flexibility and familiarity of an Excel spreadsheet.

By combining the power of Oracle and Microsoft Excel, More4apps enables you to keep control of your organization's single source of data.

Efficiency

Save time by pasting data from existing sheets into the More4apps interface for Oracle

Accuracy

Less manual data entry means better accuracy and more meaningful information for your organization

Productivity

Simple changes in business processes can deliver significant gains in productivity and capability

Quick to Implement

Tools that work straight out of the box with a familiar Excel user interface

Security

Utilizing Oracle's user authentication, integration, single sign-on and segregation of duties for uploads and downloads

Ongoing Support

More4apps class-leading support team solve issues and manage customization requests in record time

Solutions For Everyone

No matter your industry, location, or size unlock Oracle's true potential across Human Resource, Project, Inventory, Product, Purchasing, and Financial data.

Success Story

100's of Hours Saved Every Year!

“By using the EBS Toolbox across a number of our departments we were able to simplify the processes and make successful changes to the data in Oracle e-Business Suite.”

We considered various options, including improvements to our custom processes and using development

platform tools but in the end, we decided on software that required very little input from our IT department as they were already overstretched. We expected some functional improvements for the end-user teams but what we have achieved has far exceeded our expectations.

With the reduced work effort, we've been able to reassign our staff to

more productive, beneficial and enjoyable work, which is a huge bonus for a non-profit organization such as ourselves. I also found the support we received, and continue to receive from More4apps to be second to none. They have expert staff on board who understand Oracle's functionality and were able to help us through the trial process.

Whitepaper

Importing Data Into Oracle ERP Cloud

More4apps has created an end-user focused data entry method for Oracle's ERP Cloud.

The ERP Cloud Toolbox by More4apps leverages the familiarity of an Excel spreadsheet – a method More4apps has been an expert in for over 20 years.

More4apps Cloud ERP Toolbox has

modules for the different functional areas for Oracle's ERP Cloud. The efficiencies achieved from using the ERP Cloud Toolbox have shown users can save around 90% of their time and effort when compared to standard data entry forms.

Oracle offers three options for data entry and import – the traditional

Oracle Forms user interface for every day operations; a technically complex mass loader with a .csv format spreadsheet loader known as FBDI, and ADFdi a semi user friendly spreadsheet integration for a small number of data processing needs.

Learn how each option compares to the new More4apps ERP Cloud Toolbox.
