WSP is a multinational engineering and design firm with 500 offices worldwide. The firm operates in strategic construction, planning, engineering, construction management, energy, infrastructure, and community planning.

The Client

WSP creates innovative solutions to face the challenges that the future brings. They want to inspire society to stay interested, act locally, and think internationally. Therefore, WSP required a solution to simplify its data processing.

Read more to learn how More4apps tools addressed WSP's pain points by providing effortless and efficient master data processing.

Because of WSP's size and capabilities, it has many data needs that stretch across its business sectors.

The Complication

Part of its project management scope was to ensure organized project budgets with accurate and up-to-date Oracle master data. However, the Oracle systems were not effectively influencing their data.

To guarantee effortless master data affairs, they turned to More4apps, the solutions provider and trusted partner for the Excel interface for Oracle.

Debbie Canole, a Systems Analyst at WSP, explains how the business struggled with its data processes.

"Our people are working on large breakdown structures, which are complex and ever-changing," Canole said.

Canole continued, "It was a lot of work to keep them up-to-date, often requiring double entry. We found that because it was too much of a hassle, people either were not doing it or invented ways to work around it".

WSP had to find a solution for their Oracle master data problems. They were reluctant to consider a third party because the firm typically developed master data processing tools in-house.

A Streamlined Data Process

Despite its hesitation to turn to a third party, WSP discovered that the More4apps EBS Toolbox Budget Wizard would streamline their data processes and be easy to implement.

"Other products were just too hard for the end-user," Canole expressed. "We found that More4apps knew its products and were very supportive and responsive. The team understood our needs and how its products would meet them."

Simplified Solutions

More4apps solutions simplify the data process with large projects, allowing companies to directly feed accurate and up-to-date information into Oracle master data from Excel.

"The greatest benefit for us has been those working on complex project breakdown structures; are the ones who find it a useful tool," Canole attests.

"By making it easier for project administrators to update project budgets, it has encouraged them to keep them up-to-date. Everybody wants the numbers to be as accurate as possible, and the Budget Wizard is helping do that."

Happy Customer Happy Life

For WSP, everything starts with error-free budget data; without it, executives won't get an accurate picture of a project.

The Budget Wizard has made updating Oracle master data effortless, allowing project administrators to spend less time on master data tasks and focus on other business operations.

"We wanted to push something something useful to the field. The More4apps Wizard is" Canole said. "We've absolutely had a return on our investment with More4apps solutions."

WSP now uses the More4apps Budget Wizard extensively for their data processes in Asia, the United States, Australia, New Zealand, and the United Kingdom.
