Industry

Tourism

When RCI Europe needed to unlock the true potential of Oracle EBS across its global business unit, they partnered with More4apps to leverage 20+ years of Oracle expertise.

If you want faster, more accurate data loading for better business, continue reading.

The Story

RCI is a significant player in the hospitality industry, managing over 4,300 affiliated properties in 11 countries.

In the tourism industry, the Accounts Payable function is substantial, with significant complexity around membership and payments.

As a Systems Architect, Ben Pentelow wrote several AP & AR interfaces over the years. Therefore, when faced with the migration from JD Edwards to Oracle R12, his first thought was, “How are we going to get all this data into the new system?”

RCI Europe used Web ADI downloads for managing GL data, but nothing like this exists for AR, AP, fixed assets, cash management, and etc.

Perpetual Licenses = Time Savings

RCI's headquarters in the United States recommended the European operations utilize tools from [More4apps](#) to help with its mitigation and simplify data processes.

RCI Europe immediately purchased perpetual licenses for nearly all of the [Wizards](#). Pentelow notes, “this has been the best investment ever!”

No More Daunting Tasks

As a System Architect in the tourism industry, Pentelow understands that teams often require new interfaces using an [AP Invoice Wizard](#) or [APR Invoice Wizard](#). Using [More4apps](#) has made what was once a daunting effort a straightforward exercise.

The company has requested changes to existing templates and received those changes quickly. In a world where product releases happen every quarter it is refreshing that [More4apps](#) adapts to change requests promptly.

Furthermore, RCI Europe had encountered issues with custom load scripts for migrating from legacy AP Supplier data to Oracle. Racing against strict deadlines, the company switched to the [More4apps Supplier Wizard](#) efficiently and flawlessly.

Save Money & Retain Control

Pentelow uses a generic application interface wizard to load bank statement data into cash management tables, which enables automatic reconciliation of the agency's bank accounts.

Therefore, the agency didn't rely on an expensive and inflexible solution developed by external consultants. The tourism company saved substantial money using [More4apps tools](#) and retained control of its processes. By maintaining control and because of the constant change in business needs, Pentelow can quickly adapt procedures when necessary.

Get your Projects Back on Track & Keep Them There

[More4apps](#) aided in migrating the tourism agency's entire European, Middle Eastern, and African operations to Oracle R12. The company is impressed with [More4apps](#) and the reliability and effectiveness of its tools.

Using [More4apps](#) tools helped the tourism operation get its projects on track and kept them moving forward.

“ Pentelow stated, "I am constantly thinking of and developing new processes and improvements to existing procedures, which will incorporate [More4apps Wizards](#). I look forward to continuing what has, so far, been a rewarding relationship and highly recommend [More4apps](#) to businesses using Oracle and wanting to improve efficiency - it's simply unbeatable!"
